

CFN KIMYA INTEGRATED MANAGEMENT SYSTEMS POLICY

Our corporate values shape our strategic direction in all areas of our activities. In this context, we hereby undertake the followings:

- To lead the implementation of management systems in our business processes,
- To continuously review our goals while considering our Sustainability Policy and to provide the necessary resources to achieve these goals,
- To ensure and support the continuous improvement of our processes through the participation of all our internal stakeholders,
- To comply with all national and international legislations, standards and covenants to which we are subject,
- To provide our customers with products and services in a timely manner and in the most appropriate way to meet their economic, technical and all other expectations,
- To listen to our customers' voices in the most effective and objective way and to transparently offer solutions that best meet their needs, demands, and expectations,
- To manage all our processes with our suppliers within the framework of the Responsible Purchasing Policy and Suppliers Code of Conduct,
- To act in accordance with our Ethical Principles in the communication that we establish with all our internal and external stakeholders at every level of our organization,
- To support the personal and technical development of our employees, and to provide peaceful and safe working environments in terms of occupational health and safety,
- To prioritize the selection of environmentally friendly, energy-efficient, and sustainable raw materials and materials in our product design and development activities,
- To identify and eliminate risks related to occupational health and safety, process safety, environment, and energy efficiency, and to take all necessary measures completely and on time to minimize their impacts,
- To measure, monitor, the environmental impacts, carbon footprint, and energy consumption of our activities, take measures to reduce these and to purchase energy-efficient products and services,
- To save energy by using our energy and natural resources in the most efficient way, to reduce emission values and wastes, and to contribute to the circular economy model by ensuring maximum recycling.
