

## CFN KIMYA ENERGY MANAGEMENT POLICY

Being CFN Kimya, we focus on and care managing our energy activities in the most efficient way to leave a livable world for future generations in line with our sustainability principles.

Within this framework; we hereby undertake the followings:

- To manage all our processes in full compliance with all national and international legislation and standards aimed at reducing energy consumption,
- To protect the environment by keeping our corporate carbon footprint at the lowest possible level at all times,
- To continuously improve our systems by following up new technologies that provide low energy consumption, and resource projects aimed at increasing energy efficiency,
- To always be prepared for possible emergencies and hazards thanks to the risks that we manage through our proactive approach, identify the necessary actions and implement them in a timely and effective manner,
- To determine and carry out project and investment needs for the use of renewable energy,
- To continuously measure and monitor our energy consumption performance and take the necessary actions in a timely and complete manner in order to ensure energy efficiency,
- To minimize resource losses through energy efficiency optimizations and savings measures,
- To prefer to use energy-efficient raw materials, materials and systems in all processes, including product improvement and new product development processes,
- To ensure our employees participate in training programs in order to increase their awareness of sustainable energy practices.
